

SUMMARY
FALL 2010 – IEA F/S LIFE REPORT

TABLE 1: the results of the matching I did of your data files against students in Banner. The table shows overall and by chapter the number of student records in your file and the number and percent of those records that had a valid student id match to Banner. In most terms 95+% of the records had match and the rate is increasing with time. Hopefully this will help you evaluate the quality of membership data that you have and identify any chapters that provide poorer quality data. All of the rest of the analysis include only those students for whom we have a valid Banner id.

TABLE 2: the number of greek students and non-greek students broken out by student type at the time the student was admitted. Greek's mainly entered FAU as First Time in College students (freshman), but transfer students are represented also in the data.

TABLE 3: greek and non-greek undergraduates by class level. Again, Greeks are more commonly lower division – freshman and sophomore – students than non-greeks are.

TABLE 4 – 7: average credit hours attempted, credit hours completed and term GPA.

Table 4 compares Greeks vs non-Greeks overall. Greek students are more likely to attempted a full-time course load than are non-Greek students but successfully complete a similar percentage of their credit hours as do non-Greek students. Greek students have slightly lower term GPAs compared to undergraduates overall, but this may be related to the fact that non-Greek students include transfer students, many of whom are upper division.

TABLE 5: the same data broken out for male and females separately.

TABLE 6: the credit hour and GPA data by class level. Within class level, greek students attempt more credit hours per term than non-greeks, which becomes more apparent with increasing class level. This is probably due to the fact that Greeks are mainly first time in college students, who tend to be more full-time. Greeks complete a very similar percentage of their credit hours compared to non-greeks and have similar term GPAs, at all class levels.

TABLE 7: the credit hour and GPA data by chapter. This may help you to identify chapters where students are doing particularly well or are struggling academically.

TABLE 8: retention data for Greeks students. The analysis is limited to students who entered as First Time in College students in fall 2008 or fall 2009 and shows the # and % of these students who were still enrolled at FAU in the second fall after they started and the third fall after they started. Greek students were more likely to be retained to the second fall and to the third fall than are other FTICs who started at FAU in the same term they did. This may be an indication of increased engagement resulting from fraternity/sorority participation.
